# Cortex®-M7, M4, M3, M0+, M0: Arm® Cortex-M Architecture - Live Online Training

#### **Objectives**

You know the Cortex-M7, M4, M3, M1, M0 architecture and can write software in C and Assembler. You can place the programs in memory and test them. You get the perfect introduction in developing Cortex-M based systems.

### **Participants**

Hardware and software developers

#### Requirements

A basic understanding of ANSI-C and microcontrollers.

# Live-Online-Training

09.12. - 12.12.20242.800,00 €4 Days

\* Price per attendee, in Euro plus VAT

Training code: LE-CORMX

# Face-To-Face - English

**Date Duration** 15.07. – 18.07.20244 days 24.02. – 27.02.20254 days

## **Live Online - German**

**Date Duration** 09.12. – 12.12.2024 4 days

### Face-To-Face - German

**Date Duration** 15.07. – 18.07.20244 days 24.02. – 27.02.20254 days

# Cortex®-M7, M4, M3, M0+, M0: Arm® Cortex-M Architecture - Live Online Training

#### Content

#### Cortex®-M (Armv7-M, Armv6-M) Processor Architecture

- Register organization, special purpose register
- Operation modes (handler/thread, privileged/unprivileged)
- Main stack, process stack
- Cortex®-M pipeline concept
- Cortex®-M memory map, system control block, bit banding

### **Arm Processor Cores - Overview**

© MicroConsult Microelectronics Consulting & Training GmbH More trainings on www.microconsult.com. Subject to change. All prices per attendee, in EUR plus VAT.

Contact: info@microconsult.com, phone +49 (0)89 450617-71

As of 20.05.2024

- Cortex®-M, Cortex®-R, Cortex®-A
- Arm7/9/10/11

#### Cortex®-M7, M4, M3, M0+, M0 Instruction Set

- Thumb-2 instruction set
- Data processing instructions
- Branch and control flow instructions, subroutines
- Branch table, if ... then conditional blocks
- Data access instructions
- Memory barriers and synchronization
- Exclusive access primitives
- Assembler directives
- Hands-on exercises: Generating small Assembler routines, debugging

#### **Exception and Interrupt Handling**

- Exception model
- Reset, NMI, faults, SysTick, debug, supervisor calls, external interrupts
- Tail chaining, late arriving
- Nested vector interrupt controller (NVIC)
- Interrupt configuration and status
- Interrupt prioritization, priority grouping
- Fault handler
- Hands-on exercises: SystemTick, supervisor call and PendSV in the context of RTOS applications
- Hands-on exercises: Fault handlers, output of status information

## **Reset Modes, Clock Generation, Power Management**

- Clock generation
- Resets and Cortex®-M reset modes
- Sleep modes and power management
- System timer

#### **Memory Protection Unit MPU for Embedded Systems**

- Armv6-M and Armv7-M MPU
- Static configuration of the MPU
- Dynamic reprogramming of the MPU in an RTOS context
- Hands-on exercises: Using the MPU

### Cache, Tightly Coupled Memory (TCM)

- Cache basics
- Caches and TCM of Cortex®-M7
- Cache configuration via the MPU

### **Embedded Core Debugging**

- Core and system debugging
- JTAG debug port
- 2-pin single wire debug port
- Trace port interface unit
- Embedded trace macrocell
- Hands-on exercises: Debugging of C code using the μVision debugger and print output to the debug console

## **Embedded Software Development**

- Adjustment of library routines to hardware (retargeting)
- Placing code and data in memory (scatter loading)
- Linker description files
- Processor start-up, start-up file

## **Efficient C-Programming for Cortex Architectures**

- Compiler optimization, compiler options
- Interface C Assembler
- Programming guidelines for Cortex compilers
- Optimized utilization of local and global data

#### Hardware-near C-Programming According to CMSIS

- Cortex Microcontroller Software Interface Standard (CMSIS)
- Software architecture for embedded systems
- Structured description of peripherals

© MicroConsult Microelectronics Consulting & Training GmbH More trainings on www.microconsult.com. Subject to change. All prices per attendee, in EUR plus VAT.

Contact: info@microconsult.com, phone +49 (0)89 450617-71

As of 20.05.2024

- Access to peripherals in C
- C statements and their execution in Assembler
- Hands-on exercise: Using CMSIS functions, .e.g. for programming the NVIC interrupt controller

# Floating Point Unit, Digital Signal Processing

- Architecture overview for FPU
- Exception handling using the FPU
- Single-instruction multiple data (SIMD) and saturation instructions

#### Overview: Cortex®-M (Armv8-M and Armv8.1-M) Processor Architecture

- Introduction: Armv8-M processor architecture
- Extensions of the Army8.1-M processor architecture (HELIUM)
- Difference to the Armv6-M and Armv7-M processor architecture
- Differences of the new Armv8-M MPU
- Overview: Cortex®-M23, M33 and Arm TrustZone

## Exercises with Keil µVision in Assembler and C

- Hands-on exercises on Armv6-M Cortex-M0, Armv7-M Cortex-M4 and Cortex-M7 are developed and tested on evaluation boards of different suppliers.
- Boards by Infineon, NXP, ST and Renesas are available

#### MicroConsult PLUS:

- We will provide you with a download link for your exercise directory and sample solutions for all exercises.
- In addition, you get installation instructions with download links for the tool environment for you to reproduce the exercises after the training.
